

Know your quality –  
**Optical metrology**  
made by OPTOCRAFT

## OPTOCRAFT: Your partner in optical metrology

## OPTOCRAFT: Metrology systems for key markets

2001  
Company Foundation

2004  
New building

2006  
IHK Foundation Award

2011  
Innovation Award

2012  
SHSOphthalmic omniSpect

2014  
ISO 9001:2008 certificate

Optical systems play an important role in industry, R&D and production as well as in everyday life. Miniaturization in semiconductor industry and life sciences, as well as optical applications in mass-production markets like smartphones or ophthalmology, strongly depend on the **outstanding quality of the involved optical elements.**

Since its foundation in 2001, OPTOCRAFT is developing high-quality optical measurement devices. Numerous customers working in R&D in different territories and markets rely on **well-trie**d OPTOCRAFT workmanship. The goal is to prove the quality of your products like for example lenses, microscope objectives or laser systems.

With its substantial know-how, OPTOCRAFT'S team opens up innovative solutions for advances in metrology and for individual customer requests. In this way, it is possible to provide efficient standardized systems as well as perfectly customized solutions. From the first idea to the daily work: **OPTOCRAFT is your partner in optical metrology.**

### OPTICS INDUSTRIES

- Optical elements
- Objectives and optical systems

### ASTRONOMY

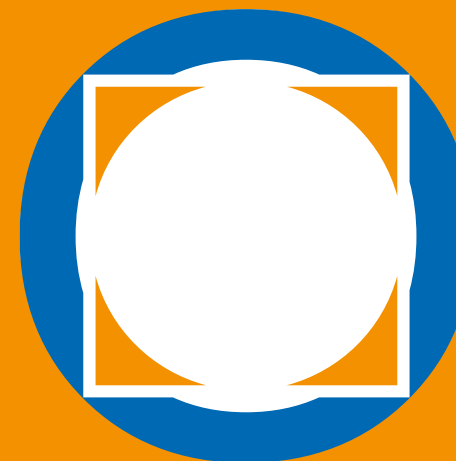

- Instruments and components
- Telescopes

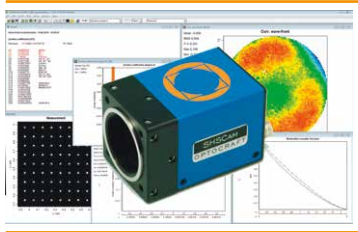

### OPHTHALMOLOGY

- Contact and intraocular lenses
- Medical laser systems

### LASER INDUSTRIES

- Laser beam characterization
- Industrial laser systems

## SHACK-HARTMANN WAVEFRONT SENSORS

### Optics- and laser-testing

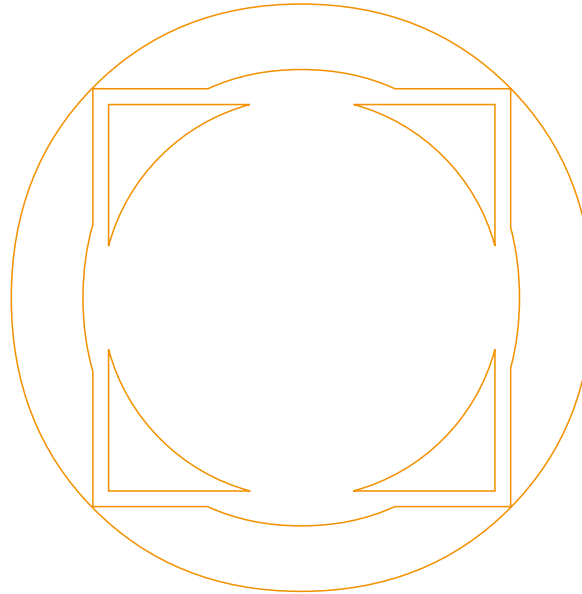

- Broad range of hardware
- Powerful software
- Extreme dynamics and high precision

## MODULAR SYSTEMS

### Customized solutions

- Transmitted and reflected light
- Light sources and sensors
- Sub-systems for integration into larger set-ups

## METROLOGY FOR OPTICAL ELEMENTS AND SYSTEMS

### Production and R&D

- From micro- to macro-optics
- Wavefront, PSF/MTF, field testing, chromatic aberrations
- Multifunctional test systems

## CUSTOMER SERVICES

- Feasibility studies
- Preparation of functional specifications
- Training and workshops

## AUTOMATED MEASUREMENT SYSTEMS

### Mass-production

- Wafer-based optics
- Robotics integration
- Automated measurement procedures
